HDL	56	mg/dL	>40	Normal
Triglycerides	138	mg/dL	<150	Normal

Imaging Summary

MRI brain scan (2025-02-05) showed no abnormalities. Findings were consistent with chronic migraine diagnosis. Report by: Dr. A. Hines (Radiology).

Physician Note & Diagnosis Summary

Emily presented for an annual wellness visit with no acute complaints. She reports stable energy levels and successful management of migraines. Vitals and physical exam were within normal limits. Labs revealed borderline LDL cholesterol; lifestyle changes were recommended. No signs of thyroid dysregulation. Patient is compliant with medication.

Diagnoses:

- Primary hypothyroidism - stable with levothyroxine
- Migraine without aura - episodic
- Mild hyperlipidemia (borderline LDL)
- Allergic rhinitis

Plan: Continue current medications, increase aerobic activity, follow Mediterranean-style diet. Repeat lipid panel in 6 months. Patient educated on migraine triggers and encouraged to maintain a headache journal.
