Physician Notes:

Patient was diagnosed with acute sinusitis and advised to rest, increase fluid intake, and apply warm compresses to relieve facial pressure. Use of saline nasal spray and a humidifier at home was recommended. There were no signs of bacterial infection observed at the time of examination. For symptom relief, the patient was prescribed Acetaminophen 500mg to be taken every 6 hours as needed for pain or fever, and Fluticasone nasal spray, one spray in each nostril once daily for 7 days. Follow-up was advised if symptoms persist beyond 10 days or worsen.
